The screenshot displays the AWS Management Console's EC2 Instances page. At the top, the navigation bar includes the AWS logo, a search bar, and the region 'Asia Pacific (Hyderabad)'. The left sidebar shows the 'Instances' section selected, with a list of navigation options including Dashboard, AWS Global View, Events, Instances, Instance Types, Launch Templates, Spot Requests, Savings Plans, Reserved Instances, Dedicated Hosts, Capacity Reservations, Images, and Elastic Block Store. The main content area shows a table of instances with one instance, 'portfolio-server' (ID: i-06f12311b1393742f), in the 'Running' state. Below the table, the 'Details' tab is selected for the instance, showing a summary of its configuration: Instance ID (i-06f12311b1393742f), IPv6 address (none), Hostname type (none), Public IPv4 address (16.112.132.28), Private IPv4 addresses (10.0.1.115), Instance state (Running), and Private IP DNS name (none).

Aurora and RDS > Databases > Create database

Choose whether to set up a connection to a compute resource for this database. Setting up a connection will automatically change connectivity settings so that the compute resource can connect to this database.

☒ Don't connect to an EC2 compute resource
Don't set up a connection to a compute resource for this database. You can manually set up a connection to a compute resource later.

☐ Connect to an EC2 compute resource
Set up a connection to an EC2 compute resource for this database.

Virtual private cloud (VPC) Info
Choose the VPC. The VPC defines the virtual networking environment for this DB instance.

Project-VPC (vpc-09338a2f08fa129df)
2 Subnets, 1 Availability Zones

After a database is created, you can't change its VPC. Only VPCs with a corresponding DB subnet group are listed.

After a database is created, you can't change its VPC.

DB subnet group Info
Choose the DB subnet group. The DB subnet group defines which subnets and IP ranges the DB instance can use in the VPC that you selected.

Create new DB Subnet Group

Create new DB Subnet Group

☐ Yes
RDS assigns a public IP address to the database. Amazon EC2 instances and other resources outside of the VPC can connect to your database. Resources inside the VPC can also connect to the database. Choose one or more VPC security groups that specify which resources can connect to the database.

☒ No
RDS doesn't assign a public IP address to the database. Only Amazon EC2 instances and other resources inside the VPC can connect to your database. Choose one or more VPC security groups that specify which resources can connect to the database.

VPC security group (firewall) Info
Choose one or more VPC security groups to allow access to your database. Make sure that the security group rules allow the appropriate incoming traffic.

Choose existing...Create new...

The screenshot displays the AWS Certificate Manager (ACM) console. A blue notification banner at the top states: "Successfully requested certificate with ID c64f7b30-8a3f-421c-805e-fd8156b38dcb. A certificate request with a status of pending validation has been created. Further action is needed to complete the validation and approval of the certificate." Below this, the certificate ID "c64f7b30-8a3f-421c-805e-fd8156b38dcb" is prominently displayed with a "Delete" button. The "Certificate status" section shows the identifier, ARN, and type (Amazon Issued). The "Status" is "Pending validation" with a clock icon and an "Info" link. The "Domains (0)" section is currently empty and shows a "Loading" state. The left-hand navigation menu includes "List certificates", "Request certificate", "Import certificate", and "AWS Private CA". The top navigation bar shows the "AWS Certificate Manager" and "Certificates" tabs, along with the certificate ID.

Client VPN endpoint ID cvpn-endpoint-0ab0366c99a8aae69	State Pending-associate	Description -	Association type Virtual Private Cloud (VPC)
Creation time June 16, 2026, 22:03 (UTC +06:30)	Endpoint IP address type ipv4	Traffic IP address type ipv4	Client CIDR 10.100.0.0/22
DNS name *.cvpn-endpoint-0ab0366c99a8aae69.prod.clientvpn.ap-south-2.amazonaws.com	VPC ID vpc-09338a2f08fa129df	Security Group IDs sg-027ad4068d983d7c8	Split-tunnel Disabled
VPN port 443	Transport protocol UDP	Server certificate ARN arn:aws:acm:ap-south-2:183192605590:certificate/c64f7b30-8a3f-421c-805e-fd8156b38dcb	Client certificate ARN arn:aws:acm:ap-south-2:183192605590:certificate/c64f7b30-8a3f-421c-805e-fd8156b38dcb
Directory ID -	SAML provider ARN -	Self-service SAML provider ARN -	Self-service portal URL -
Client connect handler ARN -	Client connect handler state Pending-associate	Client login banner text -	DNS servers -
Session timeout hours 24	Disconnect on session timeout Disabled	Connection log Disabled	Cloudwatch log group -
